

2 Microorganisms

Learning Competencies

By the end of the lesson, the students will be able to

- Appreciate the importance of microorganisms in daily life (preparation of food items, increasing soil fertility, cleaning the environment, preparation of antibiotics and vaccines).
- Understand how microorganisms cause diseases in plants and animals.
- Follow preventive measures to protect himself/herself from communicable diseases.
- Follow ways to prevent the spread of disease caused by insects.
- Follow ways of food preservation to prevent its spoilage and wastage.

Good Health and Well-Being

Overview of the Lesson
