

# DIVERSITY IN THE LIVING WORLD

Class 6

## BIODIVERSITY IS EVERYWHERE

There are millions of different species on Earth—animals, plants, fungi, bacteria, etc

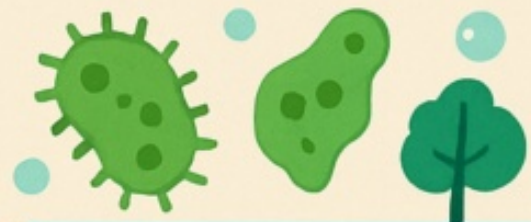

## LIVING AND NON-LIVING THINGS

The key difference: Living things grow, reproduce, and respond to their surroundings

## CLASSIFICATION OF LIVING ORGANISMS

Organisms are classified into groups like plants, animals, fungi, and bacteria based on common characteristics

## KINGDOMS OF LIFE

Animalia, Plantae, Fungi  
Protista, Monera

## IMPORTANCE OF BIODIVERSITY

Biodiversity maintains ecological balance, providing resources like food, medicine, and oxygen
