

# Test Record for the Month of .....

## Fill in the blanks.

- The plants which shed their leaves are called deciduous plants
- Roots hold the soil and protect it from being washed away.
- Stem of cactus plant is spongy and fleshy.
- Plant that grows underwater is Hydrilla.
- Mistletoe is an example of Parasitic plant.

## Write 'T' for true and 'F' for false statements.

- Plants in plains have many branches and they shed their leaves in autumn.
- Plants in coastal areas have breathing roots.
- Plants in rainforest have cones in place of flowers.
- Plants that grow in water are called aquatic plants.
- Submerged plants have narrow leaves with no stomata.

If the statement is right, draw a happy face 😊 and if the statement draw a sad face ☹️. One example is done for you.

- Pine tree grows in mountains. 😊
- Cactus is an aquatic plant. ☹️
- Mangroves have breathing roots. 😊
- Lotus grows in water. 😊
- Sundew is an insectivorous plant. 😊

## E. Give two examples of each of the following:

- |                      |                       |                   |
|----------------------|-----------------------|-------------------|
| 1. Desert plants     | <u>cactus</u>         | <u>date palm</u>  |
| 2. Grassland plants  | <u>Forstail</u>       | <u>Rajegras</u>   |
| 3. Floating plants   | <u>water hyacinth</u> | <u>Suckwood</u>   |
| 4. Underwater plants | <u>Hydrilla</u>       | <u>Tape grass</u> |
| 5. Parasitic plants  | <u>mistletoe</u>      | <u>Cuscuta</u>    |
