

helps monitor crop health, optimize
irrigation and predict yields using
data from drones and sensors.

aims to combat climate change by
reducing emissions and promoting
sustainable practices.

It is important to protect ecosystems
and prevent extreme weather disasters.

SDG 17 (Partnerships for the goals) promotes
international cooperation and resource-sharing
to achieve sustainable development.

city planner, I would develop
eco-friendly buildings, improve public
transport, create green spaces and use
efficient traffic and waste management
to build a smart, sustainable city.
I would promote waste segregation, recycling
initiatives, and awareness campaigns in
schools and communities. Success would be
measured by reduced waste levels, increased
recycling and community participation.
