

General Instructions:

Read the instructions carefully and follow them:

1. This question paper comprises of objective and subjective questions. All questions are compulsory.
2. The question paper contains THREE sections –
Section – A: Reading Skills
Section – B: Writing Skills and Grammar
Section – C: Language through Literature
3. Attempt questions based on specific instructions for each part. Write correct number of the question before attempting it.

SECTION A: READING SKILLS (10 Marks)

1. Read the passage given below .

Digital Natives and Environmental Sustainability Movements

1. In recent years, protecting the environment has become a major global issue. Young people are playing an important role in climate action and environmental campaigns. This work is not limited to streets or public places anymore; it also happens online. Young people, known as digital natives, use social media, online tools, and global networks to spread awareness and support environmental causes. These new methods have created both opportunities and problems for sustainability movements.

2 Digital platforms like Instagram, TikTok, and Twitter help young activists share information quickly, connect with people from different countries, and get noticed by leaders and decision-makers. Hashtags, short videos, and online stories can turn local environmental problems into global issues. Campaigns about waste reduction, tree plantation, or climate laws often become popular when young people use attractive visuals and interactive content. This has made activism more open, allowing even ordinary people to express their views.

3 However, online activism also has limitations. One major issue is clicktivism, where people like or share posts but do not take action in real life. Even if a post becomes popular, it may not lead to real change. Sometimes, social media algorithms limit how far important messages spread. Activists may also feel tired or disappointed when online efforts do not bring visible results.

4 Research shows that environmental movements work best when online efforts are combined with offline activities. While digital tools help in spreading awareness, real actions like clean-up drives, tree planting, and discussions with authorities bring lasting results. By balancing online and offline efforts, young activists can create stronger environmental impact.

5 In conclusion, digital natives are changing environmental activism by using technology to reach more people and build global connections. Although digital tools alone may not always lead to real action, they are still important for uniting young people and encouraging environmental responsibility.

Based on your understanding of the passage, answer the questions given below.

I The term digital natives refers to: (1)

- a) Environmental scientists
- b) Policymakers
